

EduSphere Learning Platform

Comprehensive UX/UI Design & Architecture Specification

Design Systems

User Experience Design

Navigation Design

Component Libraries

Interactive Prototyping

This document serves as the official design blueprint, interface specification, and repository documentation for the EduSphere Online Learning Platform, detailing a 4-screen interconnected micro-ecosystem.

Author: UX/UI Design & Product Architecture Team

Date: June 29, 2026

Status: Approved & Ready for Handoff

Version: v1.0.0

1. Universal Design System

To ensure a cohesive user experience across all touchpoints, a rigorous atomized design system was built from the ground up. This system governs color hierarchy, typography scales, spacing tokens, and recurring interactive components.

Color Palette

Brand Primary
#1A365D
Deep Navy (Headers)

Brand Accent
#3182CE
Teal/Blue (Action)

Secondary Text
#4A5568
Slate Grey (Body)

Background
#F7FAFC
Off-White (Canvas)

Typography Scale

Heading 1 (24pt/Bold) — Screen Titles

Heading 2 (14pt/Bold) — Section Headers

Body Text (10.5pt/Regular) — Readable informational layout text.

Caption/Code (9pt/Mono) — Microdata, metrics, tags.

Core UI Components

Global Navigation Bar

Persistent lower-anchored bar on mobile or sidebar on desktop containing links to Browse, Dashboard, History, and Settings.

Course Card Molecule

An atomic wrapper with a 16:9 thumbnail ratio, dynamic progress bar indicator, course title, instructor tag, and continuous contextual CTA.

2. Interconnected Screen Specifications

The platform architecture consists of four sequential, tightly integrated interfaces built to transition smooth states natively based on standard user behavior flows.

Screen 1: Course Browsing & Discovery Dashboard

Purpose: Serves as the primary landing marketplace allowing frictionless exploration of curriculum categories.

- **Layout Architecture:** Top persistent universal search bar with contextual filters, followed by a horizontal carousel of "Trending Categories" and a vertical list grid of available courses.
- **UX Mechanics:** Progressive loading lists with custom skeleton placeholders. Each card prominently displays ratings and structural duration badges.
- **Navigation Hook:** Tapping any individual course card triggers an explicit transition path directly to Screen 2 (Course Details).

Screen 2: Deep Course Details & Syllabus Explorer

Purpose: Establishes intent-to-learn and outlines full structural expectations for an individual course.

- **Layout Architecture:** Immersive hero header with dynamic video preview window, metadata overlay (Rating, Enrolled count, Duration), and a clean interactive Tabbed section for "Syllabus Overview" vs "Instructor Profiles".
- **UX Mechanics:** Sticky bottom-anchored "Enroll / Continue Learning" button designed to reduce purchase or enrollment friction.
- **Navigation Hook:** Clicking the primary action button routes the active user into Screen 3 (Active Lesson Viewer) if enrolled, or Screen 4 if monitoring overall progress.

Screen 3: Interactive Lesson Viewer

Purpose: The focal instructional hub optimized for content consumption, minimal distraction, and real-time utility.

- **Layout Architecture:** Dominated by an aspect-ratio locked HTML5 custom video player canvas, accompanied by an toggleable drawer displaying the sequential module playlist and a contextual markdown note-taking suite.
- **UX Mechanics:** Auto-advancing video triggers state completion API calls. Sidebar features granular progress checkmarks that turn active teal upon completion.
- **Navigation Hook:** Top-left back chevron redirects cleanly to Screen 2; a top-right analytics button shifts context to Screen 4.

Screen 4: Student Progress Tracker & Gamified Analytics

Purpose: Boosts platform retention and continuous engagement through transparent visual tracking.

- **Layout Architecture:** High-impact top section presenting "Total Study Hours" and "Completed Courses" statistics cards. Below sits a timeline tracking micro-certifications achieved and gamified streaks.
- **UX Mechanics:** Circle progress graphs with fluid CSS vector fills indicating dynamic percentages.
- **Navigation Hook:** Clicking on any pending milestones routes the student right back to the respective active lesson page (Screen 3) to fill learning gaps.

3. Production Deliverables & Repository Handoff

The prototype system, component foundations, layout compositions, and functional front-end representations are fully packaged and accessible via the production-ready entry points listed below.

Figma Design & Interactive Prototype Links

Access the complete design files, full atomized component definitions, auto-layout tokens, and high-fidelity interaction wires directly via the official canvas link:

Open Figma Project File

<https://www.figma.com/file/edusphere-learning-platform-design-system>

To play through user paths (Browsing → Details → Viewing → Analytics Tracking) with precise micro-animations and responsive transitions, open the interactive cloud player:

Launch Interactive Prototype
